

# LOOTPUSHER

Application for keeping abreast of your  
Path of Exile character gear progression

# PATH OF EXILE

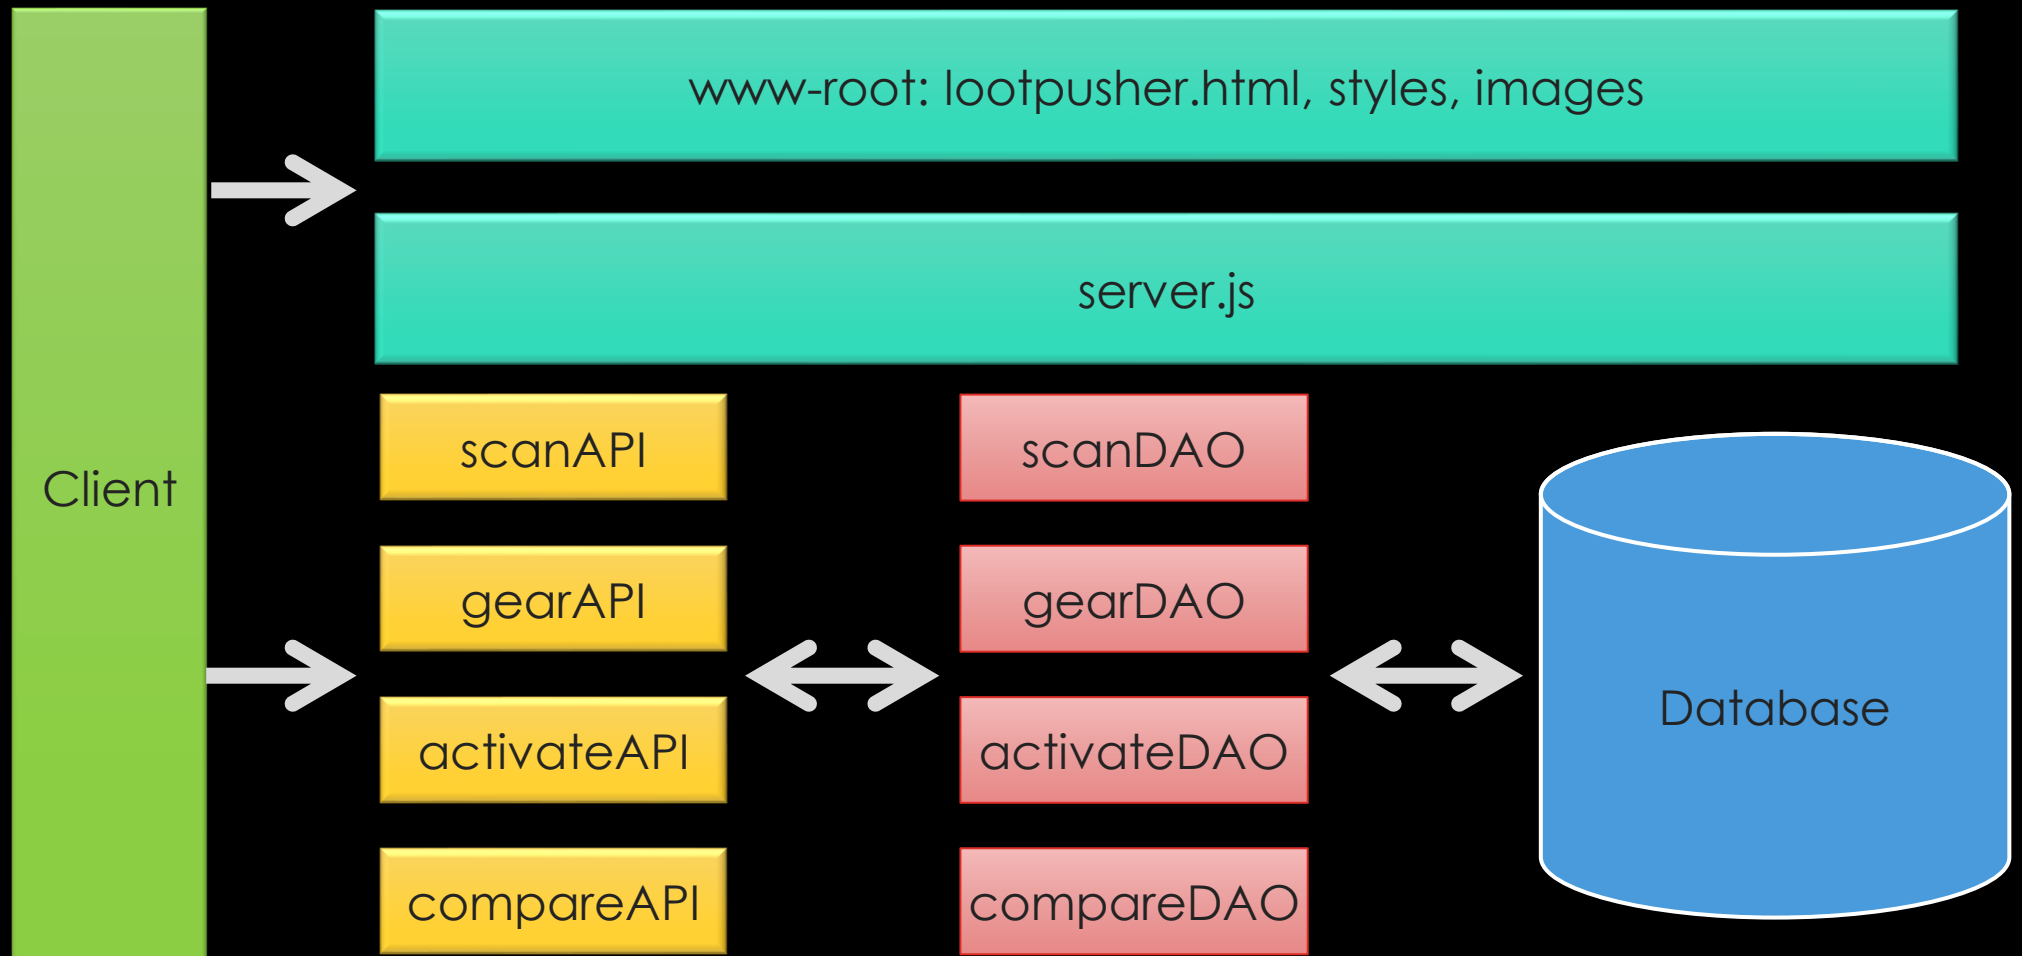

- developed 2013 by GGG, a NZ game studio
- isometric multiplayer arpg, strong influences from Diablo I/II
- consists of standard league and fresh league that lasts 3-4 months; all new characters transfer to standard at the end of league
- tracking character items after 30+ leagues is painful, so there is a need for the application

# OVERVIEW

- scan characters to register based on account, league, level range
- each character has 10 item slots
- each item has name, item level, 3 max. mods for prefixes and suffixes and tier for each mod
- choosing character displays character gear, default view is weapon 1 slot
- user can toggle activated slot and save state
- compare (unfinished feature) checks item against every activated item based on same type; announces if item is better than every character has

# SERVER ARCHITECTURE

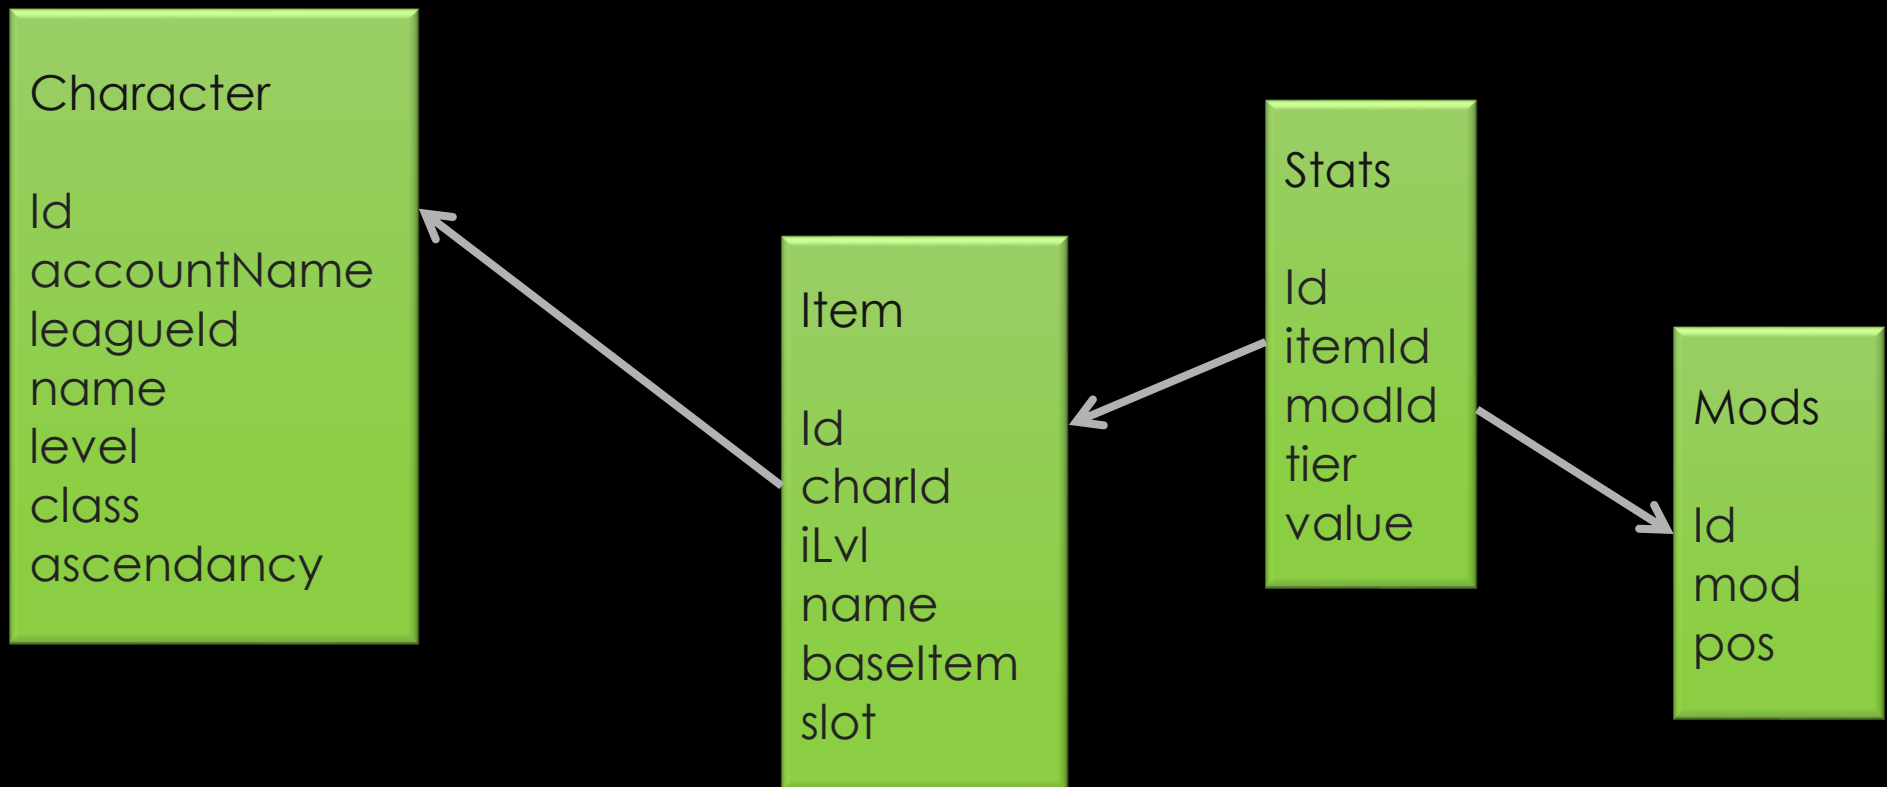

# LOOTPUSHER API

Method	Url	Description
Get	/api/scan/{id}	Load all characters by account
Get	/api/gear/{id}	Load one specific character + loot
Put	/api/activate/{id}	Toggle activate gear check by slot
Get	/api/compare/{id}	Compare new gear to all activated slots
