

HTML5 and CSS3

Some usefull links:

[MDN](#)

[W3Schools](#)

Now working with styles

You should place your styles to wwwroot/styles/start.css -file.

Start by changing the layout of the page as demonstrated, then add other effects.

List bullets

Change the list bullets into images.

- ♥ header
- ♥ footer
- ♥ main
- ♥ article

You should be able to google the obvous solution rather quicly but you'll also notice that the images/favourite.png:s are too big. Try to figure out alternative solutions. Couple different exist.

Responsives

Add a mediaquery to your css so that when the width of the page becomes less than 640px the layout changes.

Start by hiding the aside and then also do other changes required.

Banner 1

These should be nice and fancy

Banner 2

Perhaps rounded corners

Banner 3

And shadows, perhaps they should only appear when the cursor is on top of the banner

Banner 4
